

# THE SMART SOLUTION FOR EVERY IRREGULAR PENETRATION

## JM SINGLE PLY LIQUID FLASHING

**Keep buildings safe from moisture getting through irregular penetrations by using JM Single Ply Liquid Flashing.**

It's formulated to work best with JM systems—apply it around angle iron, co-located pipes, I-beams and any other difficult penetrations to help prevent water from seeping in.

**Eligible to be part of the 20-year JM Single Ply system Peak Advantage® Guarantee.**

**Make the job easier.** Go with this smart solution for application around angle iron, co-located pipes, I-beams and any other irregular or difficult penetrations.

1. Prime the surfaces
2. Cut and place the scrims
3. Embed them in liquid membrane

**Keep JM Single Ply Liquid Flashing top of mind the next time you have to work with more difficult and irregular penetrations.**

Access our training library for JM Single Ply Liquid Flashing resources, including an in-depth how-to video, an installation guide, product details and technical information.
