JM Product Offering Changes to Invinsa® and TPO 45 mil

Demand for commercial roofing products continues to be strong in 2022 while supply chain, logistic and personnel challenges linger. One of our priorities in this environment is to ensure reliable service and supply of products to support this demand. This includes optimizing manufacturing opportunities for products in highest demand. As part of this effort, we will be discontinuing the Invinsa® polyiso cover board product line to enable increased production of ProtectoR® HD products. ProtectoR HD has proven to be the preferred high-density polyiso cover board product in the market due to its versatility and strength. For similar reasons, JM will also be temporarily suspending production of TPO 45 mil 12' and 6' membranes. This too, will enable JM to focus on product skus in higher demand.

Effective immediately, we are not accepting any new orders for Invinsa and JM TPO 45 mil 12' and 6' wide products. All existing orders with a provided delivery window after March 31, 2022, cannot be fulfilled. Your Account Specialist will work with you to convert these existing orders to acceptable alternative products such as ProtectoR HD and TPO 45 mil 10' and 5' membranes. JM is committed to supporting in-progress projects which require Invinsa; please work with your Account Specialist to identify necessary quantities for project completion.

The following materials are now discontinued:

Product	Material ID
Invinsa 0.25" 48X48	90001033
Invinsa 0.25" 48X96	90001034
TPO 45 mil 6' x 100' White	90026093
TPO 45 mil 12' x 100' White	90026094
TPO 45 mil 12' x 100' Gray	90028891

Thank you for your continued business and support of JM products. Please contact your JM Representative with any questions.
