Updated Reflectivity Ratings

New solar reflectivity performance for Johns Manville Products with the Cool Roof Ratings Council.

As we enter the prime season for commercial roofing, Johns Manville would like to communicate changes to our cool roof ratings listings for both factory coated and reflective granule offerings.

Background

Johns Manville has long held a listing with the Cool Roof Rating Council (CRRC) for both our factory coated and reflective granule product lines. As technology and our operations have changed we determined it necessary to update our listing to be representative of our current product performance. The updated ratings have been posted on the CRRC website and have been included on the technical data sheets that can be accessed online at www.jm.com.

The new listing number for our CR Coated products is 0662-0007b. The new listing for our CR Granulated products is 0662-0042b. Please reference these listing numbers and the applicable ratings in evaluating our products for use. Please reach out to your JM representatives with any additional questions or concerns.
