JM Two-Part Urethane Insulation Adhesive – Extension Policy

Recently Johns Manville has experienced a significant increase in requests for shelf-life extensions for our JM Two-Part Urethane Insulation Adhesive (UIA).

Numerous factors go into a decision to extend the life of a UIA product, including proper storage and handling. Once a product has left JM's possession, we can no longer guarantee the required storage parameters are maintained. As a result, Johns Manville will not approve any request to extend the expiration date of JM Two-Part UIA.

Thank you for your continued business and support of JM products. Please contact your JM sales representative with any questions.
