Approved Fasteners in JM Peak Advantage® Guarantee Systems

In an effort to support our loyal customers and offer flexibility to complete projects in a timely fashion during the supply chain challenges affecting the roofing industry over the last couple of years, Johns Manville had published guidance for the approved use of non-JM branded fasteners in JM Peak Advantage Guarantee systems. (See bulletins [T21-006](#) and [T22-002](#))

Since the publication of those previous bulletins, raw material supply has vastly improved and stabilized, allowing JM to reliably supply JM branded fasteners to our customers.

Effective immediately, the use of JM branded fasteners and plates, carrying the JM logo on the label, will be required for use in installations seeking issuance of a JM Peak Advantage Guarantee. This requirement ensures third-party tested system performance compatibility and compliance and supports long-term service of the installed JM roofing system.

Thank you for your continued business and support of JM products. Please contact your JM Representative with any questions.
