## Changes to JM PMMA Metal Primer Offering

Due to ongoing supply chain issues JM has discontinued the JM PMMA Primer Metal product offering and replaced it with a new two-part product offering, JM PMMA Metal Primer Base and JM PMMA Metal Primer activator.

The new product provides the same performance that you have become accustomed to when using JM PMMA materials. JM PMMA Metal Primer Base and Activator is a 100% solids, low-odor epoxy primer that can be used for metal and other substrates prior to the application of the JM PMMA Field or Flashing Resins. The two SKUs must be purchased together, and no additional catalyst is needed for application of the metal primer products. Please refer to product data sheet and installation guide for specific product instructions.

### New Product Information
