## JM Two-Part Urethane Insulation Adhesive – New Application Gun

Johns Manville is making a change to the applicator gun for the 2-Part UIA Canisters. This change applies to both [Standard size canister sets](#) and [Small Canister Kits](#).

Soon you will see a new applicator gun included in our Standard and Small Canister Kits. The new applicators are black in color and have two notable changes from the old (red) guns. See images below.

1. The trigger lock to prevent accidental spraying has changed - the black applicator has a slide on the top. The red applicator used an “arm” at the bottom of the trigger.
2. The mixing tips are not interchangeable between the black and red models.

(New)

(Old)

The red applicator guns are fully functional and do not need to be returned or exchanged. This is a running change so please continue to use whichever applicator ships with your canister purchase until the transition is complete. We anticipate the switch to finalize by mid-summer.

Each Standard canister set and Small Canister Kit will continue to come with an accessory pack containing gun assembly, hose, mixing tips, and extension tubes. Please refer to [JM's 2-Part UIA Data Sheet](#) for more details regarding accessories.

Thank you for your continued business and support of JM products. Please contact your JM Representative with any questions.
