

Third-Party Spray Foam Application Certification for Johns Manville Corbond® Spray Polyurethane Foam (SPF) Products. Johns Manville has contracted with leading engineering firm Morrison Hershfield (MH) to oversee and administer a flexible and cost-effective program to help your installers achieve SPF Certification for JM Corbond SPF products.

» How to get certified in four easy steps:

To begin the certification process, please visit www.jmqapusa.com

ONE

Register online and pay application fees.

One-time company registration fee of \$100 and installer registration fee of \$50 plus \$150 fee per installer for certification examination. Fees are subject to change at any time without notice.

TWO

Successfully complete an online Health and Safety Course and pass a written exam.

Complete the American Chemistry Council's SPF Chemical Health and Safety training course and pass a 50-question multiple-choice exam. This training is available online in English and Spanish. A Recognition of Completion card with ID number is required prior to taking the SPF Applicator of Johns Manville Corbond Products training and exams.

THREE

Attend the SPF Applicator of Johns Manville Corbond Products training course and successfully pass a written exam.

The SPF Applicator of Johns Manville Corbond Products training course is available online (English only), or a JM Field Technical Representative can present the training in person. Live training is available in English and Spanish. All candidates must pass a 50-question multiple-choice written exam.

FOUR

Successfully pass a practical evaluation exam.

After successful completion of both the training and the examination, Morrison Hershfield will appraise the test results and determine whether the candidate is approved for certification. Once approved, an SPF installer will receive a temporary certification card via email within 48 hours and a laminated certification card by mail several days later. This installer's certification card is exclusive to JM Corbond products and to the registered company. It cannot be used as proof of competency with any other SPF manufacturers' products.
