

Put the Energy Efficient Home Improvement Credit to work for you. By adding insulation to a residence, not only will homeowners see improvements on their utility bills, but they can also receive a tax credit equal to 30% of the cost of insulation materials installed, up to \$1,200 each year. Plus, there is no lifetime dollar limit under the newly revised tax credit. Homeowners can make energy efficiency upgrades year after year and continue to collect the 30% tax credit.

The 25C Nonbusiness Energy Property residential tax credit (under the Inflation Reduction Act) was renamed the Energy Efficient Home Improvement Credit and revamped to provide more savings to homeowners.

Residents will see their savings from lower energy bills add up month after month, year after year. And by using 25C to claim tax credits of 30% of the cost of insulation materials, homeowners can save more money from the start.

The R-value of additional insulation required to meet the 25C credit requirements varies depending on the climate zone in which a home is located. Attics are the most common location to add insulation, along with garages, basements and crawlspaces.

No matter the insulation type or location, Johns Manville can help you. With a large selection of products that can be used for retrofitting a home, we've got the solution you need.

For more information on how to claim the tax credit, visit irs.gov for updates to Form 5695.
