## **We Nailed It! Nailboard™ Delivered Fast.**

Johns Manville can now deliver OSB (oriented strand board) Nailboard with lead times that are equivalent to its standard polyiso products (usually less than 7 days). In our Bremen, Indiana facility we have completed an equipment investment that produces Nailboard inline directly on the laminator. This new process results in greatly-reduced production times that translate to improved delivery lead time and responsiveness to our customers.

**Currently, this reduced lead time is being offered for OSB/polyiso composites only with a thickness range of 2.0" - 4.1" (in increments of 0.1"). The OSB thicknesses offered are 7/16" and 5/8" thick (nominal).**

We are also excited to announce two new JM fasteners, [Nail-Lok™ SD](#) and [Nail-Lok™ WD](#). Both fasteners are available with a star head in 1/2" increments from 3" to 8" long and eliminate the need for a plate or washer. JM requires the use of Nail-Lok SD for Nailboard attachment to steel decks and Nail-Lok WD for wood decks.

JM will continue to fulfill requests for CDX Plywood, different wood thicknesses, fire-treated wood, FSC® wood, and orders less than 12 pallets using offline equipment. These non-standard requests are subject to longer lead times and additional charges dependent upon the wood required.

Thank you for your continued business with Johns Manville. For more information, please contact your local sales representative.
