## **Facer Color Change in Coated Glass Facer Insulation Products**

Over the next few months, we are making a change to the color of our coated glass facer products. Historically our coated glass facer has been light gray for Invinsa<sup>®</sup>, Invinsa Foam<sup>®</sup> and ENRGY 3<sup>®</sup> CGF products; we are transitioning to a beige color for these products similar to what is used in the Invinsa<sup>®</sup> FR and ENRGY 3<sup>®</sup> FR products. To differentiate between our coated glass facer and FR products, please be sure to read the label on the outside packaging. All products are clearly marked on the outside of the bundle.

The performance and quality of the product will not change. This change will make us more in line with the industry and will also give us more access to supply.

Please contact your local sales representative with any questions.
