Tarless Polyiso Packaging – Fernley, NV Plant

JM continues to invest in the technology and service capabilities of our polyiso business and is proud to announce new tarless packaging for all polyiso insulation and board products manufactured at our Fernley, NV production facility servicing the Pacific Region. This new packaging is a sealed, five-sided stretch hooded film that significantly reduces the need for tarping of flatbed truck loads and allows for extended jobsite storage without additional tarpaulins or coverings for up to two weeks. The new tarless packaging is consistent with packaging available at JM's other US polyiso manufacturing facilities and creates consistency across our polyiso production and transportation network.

Tarless packaging is available on all product manufactured at our Fernley, NV facility on or after May 21, 2018. Material produced prior to this date will rapidly be depleted as stock material is replaced with new production material. Thank you for your continued support of Johns Manville products and services and we look forward to enhancing your JM experience with our new tarless packaging offering.

Matt Sayer

Polyiso and Boards Product Manager
