## Introducing JM PMMA – a Premium Liquid Membrane

The JM PMMA line is ready for shipment! The new JM PMMA line offers the same proven performance of the previous SeamFree PMMA with some important upgrades in product offering, service and installation flexibility.

### Key Upgrades Include:

- Lead time – the previous offering came from Europe and the new products are manufactured in North America. Special products or changes to existing orders can now be quickly accommodated.
- Minimum order quantity – Minimum sizes are now as small as 1 unit.
- SKU Consolidation – fewer products required to achieve a premium install. For example, JM PMMA All-Purpose Primer replaces 4 previous primers.
- White Resin – White is now the most popular PMMA finish color, and is a standard offering for flashing and field resin. The previous solution required a colored top-coat to achieve a white finish.
- Environmental Compliance: The new JM PMMA Cleaner and JM PMMA Metal Primer are both VOC compliant in all 50 states.
- Easier to use – Catalyst is now supplied in 0.1 kg bags instead of bulk pails, eliminating the need for scales and measuring spoons.

For complete information, please visit the liquid applied page on [www.jm.com/roofing](http://www.jm.com/roofing).
