Johns Manville continues to expand the offering for mechanically attached single ply membranes eligible for NDL guarantees. The above map may be used as a guide to determine what areas of the United States qualify for standard JM Peak Advantage guarantee coverage (55mph maximum and 20-year NDL term) when installing mechanically attached 12’ wide PVC assemblies.

- **Buildings less than 60’ in height located in the green region of the map need to meet the following requirements**
  - Steel deck minimum 33 KSI (22 gauge).
  - Areas classified as special wind regions require review and approval by JM’s Technical Specialist.
  - Field of roof installed with 12’ wide sheets at 12” on center fastener spacing.
  - Perimeter of roof installed with 6-foot-wide sheets with fasteners 12” on center fastener spacing.
  - Corners of the roof installed with 6’ wide sheets with fasteners 12” on center fastener spacing and an additional row of fastening down the center of the sheet, stripped in.
  - All perimeters must be calculated via FM’s bulletin 1-29. Calculated partial perimeter areas will require the additional full sheet installation.

- **All buildings located within the yellow region of the map require review by JM’s Technical Specialist prior to any guarantee approval.**
