## Johns Manville Single Ply Liquid Flashing

**Johns Manville increases primer offerings for EPDM applications of the single ply liquid flashing product line.**

Johns Manville has been evaluating additional primer options for the installation of single ply liquid flashings in conjunction with EPDM roofing systems. The new options are existing JM products and potentially allows you to utilize primers already in use on the rooftop.

Two additional primers have been qualified for use with single ply liquid flashing resins when applied to EPDM substrates. The two additional products are JM EPDM Tape Primer Plus and JM EPDM Tape Primer Plus (Low VOC). These products are available at all regional sourcing locations of current EPDM products.

The [Single Ply Liquid Flashing Application Guide](#) has been updated to include the use of these additional products. Should you need any additional technical support do not hesitate to contact your local JM representative.
