JM-Branded PowerBlankets®: The Smart Choice for Winter Applications

New! JM-branded PowerBlankets® (SKU 70009891) are now available to keep canisters warm during cold temperature applications. Powerblankets® heat canisters to a preset temperature to optimize performance in cold weather. JM-branded PowerBlankets® are in stock and available for immediate delivery.

Canister adhesives are especially sensitive to lower temperatures. Products like JM Two-Part Urethane Insulation Adhesive and JM All Season Sprayable Bonding Adhesive must be at approximately 70°F (21°C) before application to ensure proper mixing, coverage, and performance.

When applying canister adhesive in ambient temperatures between 40° - 70°F, it is highly recommended to use a JM-branded PowerBlanket®, heated wrap, or insulated box to maintain 70°F during dispensing. Canisters must be agitated prior to dispensing; please refer to detailed application instructions. If stored below 70°F, allow at least 36 hours to bring them back to temperature. Always review product data sheets for storage and application temperature ranges.

When using the PowerBlanket®, follow proper handling and folding instructions, and ensure the side marked COLD (or the side with straps) faces away from the surface requiring heat. Electrical connection required.
