Features and Components

Use: For use with JM BUR and SBS membrane products. JM PMMA Catalyst is a reactive agent used to initiate curing of JM PMMA liquid resins and primer.

Type: Catalyst for two-part, elastomeric, liquid-applied PMMA systems.

Color: White Powder

Installation/Application

• The amount of catalyst added is based on the specific product, weight of the resin used and temperature.
• Please refer to JM PMMA application instructions.

Packaging and Coverage

Container Size
50 pre-packaged 0.1 kg bags

Storage

Shelf Life
12 months from manufacture date

Storage Conditions
Clean, dry, indoor environment in an unopened container

Temperature Range
<80°F (27°C)

Mixing Resin and Catalyst

Thoroughly mix the entire drum of resin for 2-3 minutes before each use, and prior to pouring off resin into a second container if batch mixing. Add pre-measured catalyst to the resin component, stir for 2-minutes using a slow-speed (200-400 rpm) mechanical agitator or stirring stick.

The amount of catalyst added to JM PMMA resins, primers, and paste varies based on the resin type, quantity of resin to be used and temperature. Catalyze only the amount of material that can be used within the resins specified pot-life. Refer to individual product data sheets for specific recommendations and requirements for the resin being used.

Precautions

Always store closed containers in a cool, ventilated and dry location away from flame sources. MAY CAUSE FIRE IF STORED IN DIRECT SUN OR AT TEMPERATURES OVER 86°F (30°C)
