Assembly Identification

Membrane Thickness
5 = 50 mil (1.27 mm)
6 = 60 mil (1.51 mm)
7 = 72 mil (1.83 mm)
8 = 80 mil (2.03 mm)

Membrane Type
R = Reinforced
P = Polyester Fleece Backed
A = Adhered
U = Urethane Adhesive
S = Single Ply

Attachment
PVC Membrane
Fleece Backed Membrane
adhered with 2P UIA (Spatter)
Fleece Backed Membrane
adhered with RSUA (Bead)
Fleece Backed
Membrane in Hot Asphalt

Cover Board
Insulation
Vapor Barrier
Thermal Barrier

For JM Guarantee Requirements Contact JM Technical Services at (800) 922-5922 Option 3 or Refer to the JM Peak Advantage Charges and Requirements-Single Ply document

Approved Base Sheets:
- (If Applicable) Over Nailable Deck
  - DynaBase®
  - DynaBase PR
  - DynaFast® 180 S
  - DynaLastic® 180 S
  - GlassBase™ Plus
  - GlasTite™ Flexible
  - PermaPly® 28
  - Ventsulation® Felt

Deck Type:
- Existing Roof (re-cover)
- Steel (22 Ga. Min.)
- Structural Concrete

Nailable Decks include:
- Cementitious Wood Fiber
- Gypsum
- Lightweight Insulating Concrete
- Wood (Plywood, Plank, OSB)

Approved Membrane and Specification Number:
- JM PVC with Dupont™ Elvaloy KEE polymer
  - 50 mil SP5RA
  - 60 mil SP6RA
  - 80 mil SP8RA
- JM PVC SD Plus
  - 50 mil SP5RA
  - 60 mil SP6RA
  - 80 mil SP8RA
- JM PVC FB with Dupont Elvaloy KEE polymer
  - 50 mil SP5RA
  - 60 mil SP6RA
  - 72 mil SP7PA
  - 80 mil SP8PA

Approved Insulations:
- ENRGY 3: (ENRGY 3 Options)
- AGF
- CGF
- FR
- 20 PSI
- 25 PSI
- Tapered
- Invinsa Foam™

Approved Jacketing:
- (If Applicable) Invinsa® Roof Board
- Invinsa FR Roof Board
- RetroPlus™ Roof Board
- JM DEXCELL®
- FA Glass-Mat Roof Board
- JM SECURROCK®
- Gypsum-Fiber Roof Board
- JM DensDeck® Prime Roof Board

Approved Insulations:
- ENRGY 3: (ENRGY 3 Options)
- AGF
- CGF
- FR
- 20 PSI
- 25 PSI
- Tapered
- Invinsa Foam™

Approved Cover Boards:
- (If Applicable)
  - Invinsa® Roof Board
  - Invinsa FR Roof Board
  - RetroPlus™ Roof Board
  - JM DEXCELL®
  - FA Glass-Mat Roof Board
  - JM SECURROCK®
  - Gypsum-Fiber Roof Board
  - JM DensDeck® Prime Roof Board

Approved Thermal Barrier:
- (If Applicable)
  - JM SECURROCK®
  - Glass-Mat Roof Board
  - JM DEXCELL®
  - FA Glass-Mat Roof Board
  - Glass-Mat Roof Board
  - JM DensDeck Roof Board
  - JM DensDeck Prime Roof Board

Approved Vapor Barrier:
- (If Applicable)
  - DynaBase® (CA) (HA)
  - DynaBase PR (CA) (HA)
  - GlassPly® IV (HA)
  - GlassPly Premier (HA)
  - APPeX® 4S (HW)
  - DynaWeld™ Base (HW)
  - DynaBase HW (HW)
  - DynaWeld 180 S (HW)
  - JM APP™ Base Sheet (HW)
  - DynaGrip® Base SD/SA (SA)
  - JM BaseGrip™ SD/SA (SA)
  - JM Vapor Barrier SA (SA)
  - 6 or 10 mil poly with taped seams

Vapor Barrier Application Key
- (CA) Cold Applied
- (HA) Hot Asphalt
- (HW) Heat Weld
- (SA) Self Adhered
ADHERED PVC ASSEMBLY PLATE

General
This specification is for use ever any approved structural device which is suitable to the above specified system. This specification is also for use over certain JM roof insulation which provides a suitable surface for the JM membrane. This specification can also be used in certain re-roofing applications.

Note:
Consider all general instructions contained in the current JM PVC Application Guide as part of this specification.

Design
Consider local conditions and characteristics when designing, specifying and installing any roofing system. Information from the Single Ply Roofing Industry (SPRI), FM Global and local building codes can provide guidelines for the designer.

Design and installation of the deck and/or roof substrate must result in the roof draining freely to outlets numerous enough and so located as to remove water substantially in 48 hours of a rain event.

PVC Membrane Application
Before installation, unroll the JM PVC membrane and allow it to "relax." The laps of JM PVC adhered systems must be hot air welded. Clean all surfaces to be welded, follow manufacturer's operating instructions for the burners as rolled with a 150 lb. talk kits must be a minimum of 1 1/2" (38 mm) in width. Do not apply adhesive to the lip areas of the sheet that will be welded. Refer to detail P-MS-07 for heat welding key transition. Refer to the JM PVC Application Guide for further information.

PVC Edge Sealant is optional on all cut or non-encapsulated edges of reinforced membranes. This includes factory cut membranes. Refer to detail P-MS-01 for further information.

Appropriate JM Membrane Adhesives Include:
- JM PVC Membrane Adhesive (Low VOC)
- JM PVC Winter Thicker Membrane Adhesive
- Roofing System Urethane Adhesive (RSUA) (Fleece Backed Only)
- JM Two-Part Urethane Insulation Adhesive Cartridge (2P UA)
- Hot Asphalt (Fleece Backed Only)

When installing a Water Based or Low VOC two sided application with smooth backed membrane, apply adhesive to both membrane and approved substrate at rates listed on specific product data sheets. Most application of the liquid can be stored approximately half the listed rate to the membrane and the other half to the substrate. Once the adhesive becomes tacky to the touch but with no strings on the substrate only, and dry slightly to the point where strings are visible on the membrane, carefully roll the membrane to the substrate. For porous substrates such as wood and gypsum, apply more adhesive to the substrate. Low VOC adhesive can be used to bond JM PVC membrane to both horizontal and vertical surfaces. Refer to detail P-F-WM-11 for further information.

When installing a water based, one sided application with fleece backed membrane ONLY, apply adhesive to the substrate only, not to the membrane or in the void area - refer to detail P-MS-07 & P-MS-08. Keep both surfaces clean and dry. Apply adhesive to the substrate at the rates listed on specific product data sheets. Assemble membrane and substrate while the adhesive on the substrate is still wet. Refer to the Fully Adhered Systems Section in the JM PVC Application Guide for further information.

When installing a Fleece Backed Membrane in urethane adhesive (beads of RSUOA or spatter, spatter and polyester), apply the adhesive directly to the substrate and allow it to begin to rise and build body before placing membrane into the adhesive. Membrane attachment requires the membrane to be driven, refer to manufacturer for positive contact between membrane and substrate. Refer to the Installation Instructions for JM urethane in the application guide and follow the application instructions for the type of adhesive utilized.

When installing a Hot Asphalt application for fleece backed membrane, the membrane must be firmly and uniformly placed in a full mopping of hot asphalt, without voids. Asphalt must not be applied to the selvage edges of the fleece backed membrane to allow for a minimum 1 1/2" (38 mm) weld. The maximum sheet width for PVC Fleece Backed Hot Asphalt application is 12 feet with two installations.

JM PVC Profiles
JM PVC Profiles are installed on fully adhered membrane only. For the purpose of drainage, install the PVC membrane sheets parallel with the roof slope. Install JM PVC Profiles by heat welding the bottom flange on both sides in the same direction as the PVC membrane sheets to prevent the JM PVC Profiles from wrinkling. Refer to details P-MS-12, P-MS-14, P-MS-15 and P-MS-16 for further information.

Flashings and Components
Refer to the JM PVC Flashing Details in the PVC Roofing Systems Application Tools. Refer to the JM PVC Accessories Schematic and the JM PVC Accessories Selector Guide for available System Components.

For PVC membrane information refer to the JM PVC Membrane Selector Guide.

Cover Board Application
A minimum offset of 6" (152 mm) is recommended from previous layers of insulation. No board widths less than 6" (152 mm) are allowed. Refer to the "Spliced Roofing Board Codes and Application Brochure" for further information. Refer to the JM Cover Boards Selectors Guide for JM Cover Boards for further information.

Refer to the Insulation Application section below for Cover Board Securment Information including Adhered and Fastened methods of attachment.

Insulation Application
A minimum offset of 6" (152 mm) is recommended from previous layers of Insulation. Loosch take insulations should be positioned with the long side of the boards running perpendicular to the PVC sheet orientation and continuous, End joints should be staggered at least 12" (305 mm) from the end joints in adjacent rows. A minimum offset of 6" (152 mm) is recommended from plywood joints. Refer to the Insulation Installation Instructions document for further information. Install board products using bead method only.

Appropriate JM Insulation Adhesives Include:
- JM One Step Foamlite Adhesive
- JM Roofing System Urethane Adhesive (RSUA)
- JM Two-Part Urethane Insulation Adhesive (UA)
- JM Green Two-Part Urethane Insulation Adhesive
- Hot Asphalt

Refer to JM drawing UA-12 INS for Adhesive Bead Patterns.

* UA spatter not approved.

When installing a low rise urethane adhesive product for insulation boards, all surfaces must be clean, dry, smooth, compatible and free of dirt, debris, oil, grease. Apply JM urethane adhesives directly to the substrate and allow to rise and build body before placing board stock into the adhesive. Board stock attachment requires the board stock to be welded on a board stock to ensure positive adhesion. Refer to the Insulation Installation Instructions document for further information.

When adhering insulation boards using hot asphalt, firmly set the insulation boards long joints continuous and short joints staggered, into a full width mopping of hot asphalt. Porous substrates may require greater amounts of asphalt. Concrete decks must be primed with Asphalt Primer prior to application of hot asphalt. Refer to the Insulation Installation Instructions document for further information.

Appropriate JM Insulation Fasteners Include:
- All Purpose Fasteners
- UltraFast Fasteners and Plates
- Polyurethane Deck Fasteners and Plates
- Polymer Auger Fasteners

Install Fasteners and Plates at an appropriate rate determined by building code, specification, and/or JM Guarantee requirements. Refer to the "Minimum Insulation Fastening Requirements-Adhered Membrane bulletin" for further information. Refer to the Fastening Patterns in the PVC Roofing Systems Application Tools.

Roof Insulation plays a key role in energy efficiency shown in codes and standards that have mandated increasingly high R-values in US, ultimate zones. Local codes dictate the required R-values for commercial and industrial projects and the local jurisdiction should be consulted for this information.

Vapor Barrier Application
All surfaces receiving vapor barrier must be clean and free from oil, grease, rust, scale, loose paint and dirt. The substrate may need to be cleaned according to JM Application Instructions, and any required primers installed. An adhesion test may need to be performed to determine if the substrate is adequate. Vapor Barrier attachment methods include Hot Asphalt, Cold Adhesive, Hot Welded, and Self Adhered. Refer to the "JM Vapor Barrier 3A Installation Guide," the Vapor Barrier Data Sheets, and the Vapor Barriers section in SBS Roofing Systems for further information.

Thermal Barrier Application
Apply the units of approved JM thermal barrier products with long joints continuous. End joints should be staggered so that they are offset at least 12" (305 mm) from the end joints in adjacent rows. Thermal barriers provide a fire resistive layer in the roof assembly directly above the deck.

Base Sheet Application
The bitumen based base sheet for these systems are mechanically fastened. Refer to the "JM" Fastening Patterns section in SBS System Application Tools for Base Sheet fastening patterns and further information.

Deck Preparation
Before roofing work is started, the deck should be carefully inspected by the roofing contractor, the deck contractor, and the owners representative to determine that it will be able to receive the roofing system by some method which will hold the system securely, either by adhesion, ballast, or mechanical fasteners. Refer to the "JM" Roof Decks document in System Considerations for further information.

Re-Roofing
A large percentage of all commercial and industrial roofing pertains to re-roofing of existing buildings. Refer to the "JM" Re-Roofing documentation for further details and specific requirements for re-roofing projects.

JM Guarantee Requirements
JM Peak Advantage guarantees are available up to a 30 year term with approved components and assembly make-up. Refer to the "JM Peak Advantage Charges and Requirements-Single Ply" for additional guarantee information.

Refer to the JM Peak Advantage Guarantee Information document for additional guarantee information and guidelines.

Refer to the JM Peak Advantage Guarantee Specimen document to see a JM Peak Advantage Guarantee sample.

All guaranteed installations must follow the guidelines for the requested guarantee. Not all JM specifications are eligible for all JM Peak Advantage Guarantee terms or enhanced coverage. Please contact JM Guarantee Services at (800) 922-0522 Option 3 for specific requirements.

All projects requiring a guarantee from JM must be applied for a minimum 14 days in advance of job start.

Refer to the Preventative Maintenance Brochure for roof and building maintenance guidelines.
