What is SeparatoR CGF?
SeparatoR CGF is a versatile, ½”-thick cover board solution that is designed for re-cover applications and offers performance and value. Compatible with most membrane-application methods, the 25 psi compressive strength, closed-cell foam core and inorganic coated glass facers offer dimensional stability, moisture resistance and high R-value (2.9) and will not promote mold or mildew growth. With a nominal weight of 0.28 lbs/ft², SeparatoR CGF is an excellent choice where structural limitations may restrict additional loading.

ADVANTAGES

LABOR SAVINGS
Easy cutting, handling and installation
Extremely lightweight, at 9 pounds per 4’ x 8’ board
MORE SQUARES PER TRUCK
675 squares on a 48” flatbed truck
Lower freight costs
Less fuel surcharge
Less unloading/loading time

HIGH R-VALUE (2.9)
More than 2x greater than wood fiber and 4x greater than gypsum

MOISTURE AND MOLD RESISTANCE
Inorganic coated glass facers with a closed-cell polyiso foam core

VERSATILITY
Provides an excellent substrate for all membrane application types, including adhered, induction-welded, mechanically fastened and low-rise foam adhesive

EFFICIENT FM 1-90 FASTENING FOR ADHERED-MEMBRANE APPLICATIONS
8 per 4’ x 8’ board achieves FM 1-90 with adhered, reinforced-membrane applications over a minimum 22-gauge steel deck or structural concrete deck.

11 per 4’ x 8’ board achieves FM 1-90 with adhered non-reinforced-membrane applications over a minimum 22-gauge steel deck or structural concrete deck.
