MORE COST-EFFECTIVE SOLUTIONS FOR YOUR METAL ROOF

Johns Manville has addressed the problems of aging roofs with multiple comprehensive systems specifically designed for retrofitting metal roofs.

JM RHINOPLATE

New wind ratings, fewer fasteners and faster installation.

A common application for single ply systems is to mechanically fasten the membrane to the purlins. JM RhinoPlate is an alternative attachment solution.

The advanced induction-welding technology of the JM RhinoPlate system results in a nonpenetrating membrane installation with enhanced wind resistance. The specially coated plates are attached directly to the purlins with JM Purlin Fasteners, and the membrane is induction-welded to the JM RhinoPlates. The JM RhinoPlate system eliminates lap fastening, resulting in fewer seams and reduced membrane waste.

*Products that are compatible with the system are JM PVC with DuPont™ Elvaloy® 60 mil/MIN or greater, JM PVC SD Plus 60 mil or greater and JM TPO 60 mil or greater.

JM EPDM R FIT

No extra primer needed, no seam contamination and easier installation.

Installation becomes less intensive and an even faster process, thanks to this tape-to-tape application system. JM EPDM R FIT gives you an innovative solution that eliminates primer and field-applied tapes in the lap. Prime the back side of the sheet and secure the RPS using either High Load Fasteners and Plates or Polymer Batten Strip. There’s no seam contamination caused by rooftop debris or foot traffic, and the result is a nonpenetrating membrane installation.

If you have questions about the different Metal Retrofit systems JM offers, visit JM.com/roofing or call (800) 922-5922.
Johns Manville offers one of the most comprehensive guarantees in the roofing industry. That’s the advantage you can expect from a longtime, dependable leader with the financial backing of Berkshire Hathaway.
