DESCRIPTION
XPS PIB (eXtruded PolyStyrene Pipe Insulation Billet) is a rigid thermoplastic foam manufactured by a proprietary extrusion process that forms a uniform, void-free, closed cell structure. This structure, along with the naturally water-repellent nature of the polystyrene resin, gives XPS PIB products high compressive strength, low friability and excellent resistance to water vapor and water absorption from freeze-thaw cycling. XPS PIB is non-dusting and non-irritating and is not a known food source for mold and mildew.

APPLICATIONS
XPS PIB is used extensively in industrial and commercial piping applications. With a service temperature range of -320°F to 165°F (-196°C to 74°C), XPS PIB is a preferred material for low-temperature systems, both for minimizing heat gain and preventing surface condensation.

XPS PIB maintains its key insulating properties in low-temperature applications and other environments with high humidity and high-moisture conditions.

Typical applications for XPS PIB include:
- Ammonia refrigeration lines
- Freezer rooms
- Chilled water piping
- Transport pipelines
- Cold storage systems
- Refrigeration equipment
- Pharmaceutical plants
- Cryogenic systems

SIZE
XPS PIB is extruded into billets. Height and width:
- 7" x 14" (18 cm x 36 cm)
- 8" x 16" (20 cm x 41 cm)
- 10" x 20" (25 cm x 51 cm)
Length: 9' (2.75 m)

AVAILABILITY
XPS PIB insulation is distributed through JM’s extensive Authorized Fabricator Network

INSTALLATION
XPS PIB is specifically formulated for easy fabrication into many shapes, such as pipe coverings, valve and fitting covers, and others to meet specific design needs. Because of the critical design aspects in many applications, JM recommends contacting qualified designers for system design.

PHYSICAL PROPERTIES
XPS PIB exhibits the properties and characteristics indicated in Table 1 when tested as represented. Consultation with local code officials and design engineers/specifiers are recommended before application. As with all cellular polymers, XPS PIB will degrade upon prolonged exposure to sunlight. A covering to block ultraviolet radiation must be used to prevent degradation. Other coverings to protect the insulation from the elements may be required.

ENVIRONMENTAL DATA
XPS PIB is manufactured without the use of CFC or HCFC blowing agents. XPS PIB is recyclable and can be reused in many applications.

FIRE PROTECTION & SAFETY CONSIDERATIONS
XPS PIB requires care in handling. All persons working with this material must know and follow the proper handling procedures. The current Safety Data Sheet (SDS) and General Handling Recommendations for XPS PIB contain information on the safe handling, storage and use of this material, and can be found at www.jm.com.
