**Recycle Content of Products Manufactured on Unit 106 Winder, Georgia
(Q2 2019 Update)**

Johns Manville continues to dedicate our resources to making products that are well-designed, well-tested, and environmentally responsible. Increasing the recycled content of our products remains a key objective for JM as we move forward and we will work to continually add more recycled content to our fiber glass insulation products.

Spin-Glas® WHEQ / Range-Glas® EQ insulation manufactured on Unit 106 in Winder, GA, continues to have good recycled content levels. We are pleased to announce that over the 12 months ending June 30, 2019, JM used a weighted average of 30% post-consumer recycled glass¹ as a percent of glass weight in Winder Unit 106 products.

Please contact me or your JM Channel Leader should you require any additional information.

Sincerely,

A handwritten signature in cursive script that reads "Rachel Lord".
