For use with 1/4", 1/2" and 5/8" GoBoard® waterproof tile backer board

1 1/4" Washers
1 5/8" Hi-Lo Fasteners
for use with
Wood Studs

- Attaches 1/4", 1/2" and 5/8" thick GoBoard to wood studs and subfloors.
- Hi-Lo threads for increased holding power and reduced driving torque.

1 1/4" Washers
1 5/8" Self-Drilling Fasteners
for use with
Steel Studs

- Attaches 1/4", 1/2" and 5/8" thick GoBoard to steel studs.
- Self-drilling tip meeting SAE J78 hardness and timed test requirements.

Installation Tips
- Cut GoBoard with a utility knife.
- Install GoBoard with 1/2" gaps between all boards.
- Install GoBoard Washers every 12 inches in interior areas first, avoiding board joints initially.
- Seal all joints prior to installing GoBoard Washers over joints to ensure proper seal underneath washer.
- Seal all GoBoard Washer locations.
- Begin tiling when GoBoard Sealant skins over.
- Grout the next day.
1. Position GoBoard®. Use shims or spacers to ensure ⅛” gaps.
2. Place first GoBoard® Washer approx. 12” from edge (push washer into GoBoard surface).
3. Install the provided Hi-Lo or Self-Drilling fastener.

4. Install remaining washers spaced 12” apart in the interior area (field) of board. To ensure a waterproof installation, GoBoard® Washers should only be installed around board perimeters AFTER GoBoard® Sealant has been applied.

5. Position next board; use spacers to ensure ⅛” gaps.
6. Repeat steps 2 thru 4 to install GoBoard® Washers.
7. Install additional boards until wall is covered with GoBoard.

8. Fill ⅛” gaps with GoBoard® Sealant or equivalent.
9. Repeat steps 2 thru 4 to install washers over joints.
10. Using a putty knife, spread excess sealant 1” on either side of joint. Apply more sealant as needed.
11. Apply sealant over each washer.
12. Using a putty knife, spread sealant to completely cover washer with sealant. Apply more sealant as needed.

Cover adjacent walls with GoBoard® repeating steps 1 thru 12.

Once all boards are installed, begin tiling when GoBoard® Sealant has formed a suitable skin layer, which is usually 30 to 60 minutes depending on ambient conditions. In dryer climates or when installing at colder temperatures, GoBoard® Sealant will take longer to skin over.
